

Individual trial

+75% contrast
+100% coherence
1000 ms length

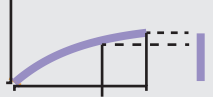

Stimulus effect calculation

Right con - left con

$\times \backslash \text{Beta_contrast}$

Right coh - left coh

$\times \backslash \text{Beta_coherence}$

$\times \backslash \text{Beta_bias}$

Stimulus length effect

Longer responses scale exponentially.

Effect $\times \text{Length}^{-0.7}$

Probit function
