

## Individual trial

+75% contrast  
+100% coherence  
1000 ms length

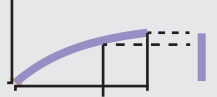

## Stimulus effect calculation

Right con - left con

$\ast \backslash \text{Beta\_contrast}$

Right coh - left coh

$\ast \backslash \text{Beta\_coherence}$

$\ast \backslash \text{Beta\_bias}$

## Stimulus length effect

Longer responses scale exponentially.

Effect  $\ast$  Length  $\wedge -0.7$

## Probit function

*Cumulative gaussian*
